

© Software as a Service (SaaS)

Using email, collaboration tools, or business software without ~~using~~ installing or maintaining the software, yourself. Example: Microsoft 365

26. Version Control System (VCS)

It is tool that helps track changes made to file over time. It all allows multiple people to work on the same project, keeps a history of changes, and make it possible to restore previous versions if something goes wrong.

→ Git

It is the world's most widely used distributed version control system. It was created to help developers track changes in source code, but it can be used for any type of file.

Developers use Git to track code changes, collaborate on software changes, and bug fixes and deploy applications.

Data analyst use Git to track changes in SQL queries and notebooks, reproduce and audit analytical work, collaborate on reports and dashboards. eg GitHub & GitLab.

"Commit" is a saved snapshot of the project at a specific point in time.

"branch" is an independent line of development.

27. A Jupyter Notebook is an interactive web-based

application that allows users to create and share documents containing live coding, text, notes, Data Visualization and charts. It is organised in cells where you can write and run code one section at a time and immediately see the output below the cell.

Mostly commonly used with Python.
